

# August 2017 – 2<sup>nd</sup> Webinar Sensors – Part I : Meaningful Information from the Parameters

Anna Demina Account Manager, North America

Ranjan Kaushal Sales Manager, North America

#### Agenda

#### 1. Learn Your Device: Parameters Description

#### 2. Create Sensors

3. Copy Sensors to Other Units

### 1. Learn Your Device: Parameters Description

1- What Data is currently forwarded from your device? Learn the meanings of such data = learn the meaning of each parameter Check Device Webpage/ contact hardware@gurtam.com

2- What Data can be forwarded from your device? Learn the meanings of such data = learn the meaning of each parameter Check Device Webpage→ Change device configuration Contact hardware@gurtam.com

As a result you should have a list of parameters you want to use for sensors creation!

#### 1. Learn Your Device: List of Parameters

Sample List of Parameters for Demo OBD (Xirgo OBD device): ign – for ignition sensor mileage – for mileage sensor rpm – for RPM (Engine Speed) sensor bat – for battery voltage sensor vehicle\_number – for VIN sensor dtc – for DTC (Trouble Code) sensor

### 2. Create Sensors

1- Select one of the Parameters you want to work with (for example ign) 2- Open Unit Properties, open Sensor Tab and click Plus button 3- Name Sensor (any name of your choice) 4- Select the Type of Sensor (learn types of Sensors from Wialon Manual) 5- Find selected parameter in the dropdown menu of Parameter Field 6- Click OK to save

### 3. Copy Sensors to Other Units

Do you have other units with the same Device Type? Yes? Then, let's Learn "Export to WLP" tool to copy sensors together!

- 1. Open Unit properties
- 2. Press "Export to WLP" button
- 3. Select Unit on left menu and Sensors on the right menu
- 4. Select Mode "Item"
- 5. Press "Next"
- 6. Select "Other Units" on the Right Menu. Use search by "Device Type" if necessary
- 7. Press "OK" to save

## Thank you for your attention!
