

The ultimate platform for
GPS tracking and IoT

FLEET MANAGEMENT

TEMPERATURE CONTROL

DRIVER SCORING

VIDEO TELEMATICS

Trusted: 20 years on the international market

Universal: seamlessly works with 3,100+
GPS device models

Flexible: delivered as a cloud- and server-
based solution where you can configure every
parameter

Supportive: 24/7 multilingual technical
assistance to 2,400+ partners globally

Large-scale: 3.7 million vehicles tracked
in 150+ countries

Extra: industry-specific functionality

Fleet management

The platform allows controlling various fleet aspects
from overall performance to operation costs.

- **Real-time tracking and analytics.** Enhance fleet performance, keep the cargo safe at all times, make employees drive responsibly, and save money on maintenance.
- **Fuel consumption control.** Monitor fuel consumption in all types of vehicles, diesel generators, and filling stations.
- **Maintenance control.** Reduce operation costs, avoid critical breakdowns, and minimize the time spent at the service station.

Temperature control

With Wialon, it becomes possible to prevent product waste and ensure the cold chain by controlling the temperature inside the refrigerator trucks and stationary cooling chambers.

- **Effortlessly configure temperature parameters** and track them in real time.
- **Collect and analyze temperature data** from trackers and sensors.
- **Get alerts** in case of temperature deviations or when operators forget to close the refrigerator door properly.
- **Take advantage of comprehensive reports and graphs** to follow temperature changes within specified periods.
- **Plan maintenance** of refrigerators in advance.

Driver scoring

Wialon provides a customizable driving quality assessment based on violation criteria. Improve fleet and staff safety, reduce fuel costs, and enhance cargo integrity and preservation.

- **Detailed presentation of driving quality** for each vehicle in a user-friendly visual format.
- **Access to the details on violations** with tracks and event markers on the map.
- **Driving quality evaluation** based on various criteria and driver ranking based on their overall performance.
- **Violation criteria** presets for vehicles, buses, and trucks for quick configuration.

Video telematics

Wialon brings together GPS tracking and video telematics in one platform to reduce accident rates, and improve safety on the road.

- **Use video playback and livestream** to capture, observe and analyze any road events to make informed decisions.
- **View videos from reports or request previously saved videos:** accurate, unbiased footage enables precise incident analysis.
- **Easily configure** devices for a quick start.
- **Work with video software compatible with various MDVRs** and available in web and mobile app versions.
