

# HECTERRA – A SOLUTION FOR AGRIBUSINESS

This is an effective web application designed specifically for the agricultural sector. It monitors field works based on the telematics data from Wialon, a GPS monitoring platform.

The solution delivers data on fields, crops, and cultivations as well as on drivers and special vehicles to agronomists, dispatchers, and managers.

## Features

### API for integration with any of the company's software

Data transmission to all kinds of accounting systems.  
Development of agribusiness management systems of any complexity.

### Fields and crops

Fields import from a file or creation of fields right in the application.  
Logging crop rotation, and creation of a crop catalogue.  
A detailed history of operations for each field.

### Field cultivations

Cultivation search and approval.  
Calculation of field areas cultivated and fuel consumed.  
Visual representation of overlaps and omissions.

### Special vehicles and drivers

Use of drivers, units, and trailers created in Wialon.

### Reports

Generation of reports for various parameters.  
Reports export in .csv and .xlsx formats.

# WHY USE HECTERRA?

Specialized Wialon-based solution

Full-featured API for all sorts of integrations

Simple and user-friendly interface

Special vehicles and drivers control

Detailed reports on operations performed
